

**Your phone may be spying on you, warns Edward Snowden.**

While TV is a medium you watch, the Internet is a medium that watches you, as you watch... For example, intelligence agencies – or anyone else, for that matter – can run a nifty little piece of malware called “Nosey Smurf” on your phone to listen in on everything going on all around you. And it’s not just phones. Internet-enabled devices – from Amazon’s Echo to your new toaster – can have “ears,” waiting for your command...or be used for more nefarious purposes. Snowden’s warnings presaged last year’s DDoS attack on DNS host Dyn that used connected devices like DVRs and even baby monitors to take down major sites like Twitter, Spotify and Amazon.

**This simple, 30-second breathing exercise wakes**

**you up like a cup of coffee.**

Whether you skip caffeine to get a better night’s rest, or just wake up slowly, here’s a quick way to activate your brain and give yourself an energy boost. It can help you beat that mid-afternoon slump, or to just get going in the morning. If you’re doing it in the office, find a quiet place, like an unused corner or stairwell. Stand up straight, arms gently at your sides. Leaving your elbows pointing down, raise your hands up to shoulder level. Now, inhale deeply and raise your hands and arms straight up over your head. Quickly exhale and lower your arms. Repeat for 30 seconds, or until you’re re-energized.

**No bigger than a water bottle when folded, this “personal drone” is packed with features.**

DJI’s new “prosumer” drone, the Mavic Pro, crams lots of

© MAZIK ANDERSON, WWW.ANDERSTOONS.COM

excitement into its compact size. Unlike other, more confusing foldable drones, it’s a snap to fold or unfold. Yet, at \$999, including a light yet rugged remote, it’s not just a toy. The Mavic Pro can climb at 16.4 feet per second up to 1,640 feet, and can fly as far as eight miles away at speeds up to 40 mph, though you’ll start in newbie mode, at a top speed of 27 mph and max height of 400 feet. Its camera features obstacle detection and gesture recognition, and shoots 4K video, stored or streamed.

**Uh-oh...these AI machines just created their own secret language. And they’re probably talking about us right now...**

Well, sort of. And the last part is certainly not true. As far as we know... Google’s AI team recently ran across something curious. Back in September, Google announced its Neural Machine Translation system had gone live. Using deep learning, it improves translation from one language to another. But the AI guys decided to take it a step further. Until then, they had to teach the machine how to translate. But having learned the process, could the machines then translate unfamiliar languages on their own? Turns out they can. So can they now talk among themselves? We don’t know... Don’t panic (yet), but do stay tuned.

“What about Instagram?”

**THE PROGRESS REPORT**

Everything you need to know in a few minutes or less...

**New Product**

Hello Everyone!  
We are off to a great start to the new year. I wanted to mention that in the last couple of months we have seen a surge in requests for more info on our new VoIP phone system offering. This system has an unbelievable feature set for an incredible price. The best part is that there is no big upfront cost. VoIP is taking over in the telecom industry. Send us an email today if you would like more info.

**February 2017**

This newsletter is provided by Progressive Computing, Inc. We hope you find it to be valuable and encourage any feedback.

We believe that our Partners deserve the best possible service and support.

We strive daily to improve our systems, process and procedures to ensure that we can make a lasting relationship. Please don't hesitate to reach out if you have any questions or concerns about the service we provide.

**That Fake App Just Stole Your ID**

Ryan loved tweaking photos on his Android phone.

He’d heard rave reviews from his friends with iPhones about Prisma, a new iOS app for image editing. So when he heard Prisma would soon be released for Android, he logged in to the Google Play Store to see if it was there yet.

To his surprise, he found one that looked just like what his friends were describing. Delighted, he downloaded and started using it. Meanwhile, the app – a fake – was busy installing a Trojan horse on his phone.

When he got to work the next day, he logged his phone into the company network as usual. The malware jumped from his phone to the network. Yet no one knew. Not yet, but that was about to change...

Now, this isn’t necessarily a true story (at least, not one

we’ve heard of – yet...), but it absolutely could have been. And similar situations are unfolding as you read this. Yes, possibly even at your company...

Fake apps exploded onto iTunes and Google Play last November, just in time for holiday shopping. Apple “cleaned up” iTunes in an effort to quell users’ concerns, but hackers still find workarounds. Unfortunately, these fake apps pose a real threat to the security of your network. Especially if your company has anything but the strictest BYOD (bring your own device) policies in place. And the more your network’s users socialize and shop on their smartphones, the greater the risk of a damaging breach on your network.

Fake apps look just like real apps. They masquerade as apps from legitimate

continued pg2

merchants of all stripes, from retail chains like Dollar Tree and Footlocker, to luxury purveyors such as Jimmy Choo and Christian Dior. Some of the more malicious apps give criminals access to confidential information on the victim's device. Worse yet, they may install a Trojan horse on that device that can infect your company's network next time the user logs in.

*"Fake apps can infect your phone or tablet and steal confidential information."*

phone or tablet and steal confidential information, including bank account and credit card details. They may also secretly install on your device malicious code that can spread, including to your company network.

Take a moment and reflect on these five tips before downloading any app:

1. When in doubt, check it out. Ask other users before downloading it. Visit the store's main website to see if it's mentioned there. Find out from customer support if it's the real McCoy.
2. If you do decide to download an app, first check reviews. Apps with few reviews or bad reviews are throwing down a red flag.
3. Never, EVER click a link in an e-mail to download an app. Get it from the retailer's website, or from iTunes or Google Play.
4. Offer as little of your

**So what can you do?**

First, keep yourself from being fooled. Anyone can easily be tricked unless you know what to look for. Take the following advice to heart and share it with your team:

**Beware of Fake Apps!**

In case you weren't aware, one of the latest and most dangerous Internet scams is fake apps. Scammers create apps that look and behave like a real app from a legitimate store. These fake apps can infect your

information as possible if you decide to use an app.

5. Think twice before linking your credit card to any app.

Most importantly, get professional help to keep your network safe. It really is a jungle out there. New cyberscams, malware and other types of network security threats are cropping up every day. You have more important things to do than to try and keep up with them all.

**The Most "Bullet-Proof" Way To Keep Your Network Safe**

Let's not let your company become yet another statistic, hemorrhaging cash as a result of a destructive cyber-attack. Call me TODAY at 646-378-5101, or e-mail me at robertp@progressivecomputing.com, and let's make sure your systems are safe. I'll provide you with a Cyber Security Risk Assessment to check for and safeguard against any points of entry for an attack. This service is FREE, but DO NOT RISK WAITING: contact me NOW before the next scam puts your network at risk.

**Help Us Out And We'll Give You A Brand-New Kindle Fire For Your Trouble**

We love having you as a customer and, quite honestly, wish we had more like you! So instead of just wishing, we've decided to hold a special "refer a friend" event during the month of February.

Simply refer any company with 15 or more computers to our office to receive a FREE Computer Network Assessment (a \$397 value). Once we've completed our initial appointment with your referral, we'll rush YOU a free Kindle Fire of your choice as a thank-you (or donate \$100 to your favorite charity ... your choice!). Simply call us at 646-378-5101 or e-mail us at sales@progressivecomputing.com with your referral's name and contact information today!

**Shiny New Gadget Of The Month:**

**Mevo Puts You In The Director's Chair**

A single static video camera can make for some pretty boring storytelling...but who's got multiple cameras, a crew to run them and a team of editors?

Well, now your videos can look like you have an entire crew behind the scenes, with Mevo. Mevo is a new type of video camera and app that lets you shoot and edit multiple video shots on the fly, all while recording and/or live streaming.

Let's say you're shooting a band concert. You get to mix in shots of the guitarist, the drummer and bass player together, and a wide-angle view of the whole band. Plus Mevo follows their faces as they move around so you don't have to. You just sit back, and cut and zoom on the fly.

On the downside, Mevo's battery lasts only an hour, and image quality is limited to mobile viewing. Still, with all the cool possibilities you get with Mevo, you may start getting ideas about becoming the next Spielberg. GetMevo.com

**Smart Closing Technique, Step 2**

Let's say you're closing a deal and you've already taken the first step: you've summarized the client's underlying need...

Now you're ready for Step 2: Say what you plan to do.

Describe exactly what you'll do to help the client successfully satisfy their underlying need. Even smart people worry about putting themselves out there by offering a plan. They worry that someone may disagree with them. They worry about proposing a plan that doesn't work. That's why many advisors stay "safely vague" rather than offering a specific plan.

But being vague doesn't help leaders solve some of their biggest problems. You have to have the courage to propose a plan. For example: "I have some ideas about how you can achieve your goals. Want to hear them?"

"Yes!" (the client says, while taking out a notebook and a pen).

"There are five parts to what I think you need to do, in this order. They are designed to increase your power score, starting with priorities, who is on your team and relationships. First, there is no way you are going to be able to take the company in a whole new strategic direction without the board's support."

"That's true."

"So first we have to articulate your vision and your priorities on paper, with goals and strategy and budget implications, and then get the board's support."

"Right, it's going to change our budget, so rather than let the board nix it this fall, I

should get out in front of this and get their support from the beginning."

"Second, you seem to have questions about the capabilities of many of the key leaders in the US, Europe and in your Asia region. It would be helpful to assess your team, to have a clear view of who is going to fit in the new organization, and who is not a fit."

"Yes, that would be helpful—to have an X-ray of the org chart and figure out who needs to go where to align with the new strategy."

"Third, fourth and fifth will be all about culture change. Change the incentives. Change the meeting cadences of what metrics are tracked and discussed—who meets when to discuss what. And what some of our most successful clients have done in situations like this is design workshops—like a roadshow—for you and key leaders to educate and train the next two levels on what you expect from them, and why, in the new world order. This gets the troops aligned behind your new vision."

"Wow! Yes, yes and yes."

"And even if you do all of that, I only give it a 70% chance you will fully actualize your goal within three years—in the market and culturally. Still, that's a lot better than the 5% chance you give yourself today."

"I'd take 70% over 5%."

Now that you've stated your plan, you are in a much better position to close the deal.

Chairman & Founder of ghSMART. Geoff is co-author, with his colleague Randy Street, of the New York Times bestselling book Who: The A Method for Hiring and the author of the #1 Wall Street Journal bestseller Leadocracy: Hiring More Great Leaders (Like You) into Government.
